

# CONNECTION TO THE AUSTRALIAN CURRICULUM

## LITERACY

Learning languages develops overall literacy. It involves conscious attention and focused learning. The art of storytelling helps create confident communicators, imaginative thinkers and informed individuals. It provides the creator to navigate their moral compass and engage listeners in debate and wonder.

Individuals learn to analyse, understand, communicate and build relationships with others and with the world around them. Using symbolism in language helps the storyteller and listener understand how language patterns can be used for emphasis.

## NUMERACY

Learning languages affords opportunities for learners to use the target language to develop skills in numeracy, to understand, analyse, categorise, critically respond to and use mathematics in different contexts. This includes processes such as using and understanding patterns, order and relationships to reinforce concepts such as number, time or space in their own and in others' cultural and linguistic systems.

## THE ARTS

The arts have the capacity to engage, inspire and enrich all students, exciting the imagination and encouraging them to reach their creative and expressive potential. The five arts subjects in the Australian Curriculum provide opportunities for students to learn how to create, design, represent, communicate and share their imagined and conceptual ideas, emotions, observations and experiences.

In the Australian Curriculum, the Arts comprises five subjects: Dance / Drama / Media Arts / Music / Visual Arts.

## SCIENCE

Science provides opportunities for students to develop an understanding of important science concepts and processes, the practices used to develop scientific knowledge, of science's contribution to our culture and society, and its applications in our lives. The curriculum supports students to develop the scientific knowledge, understandings and skills to make informed decisions about local, national and global issues and to participate, if they so wish, in science-related careers.

In addition to its practical applications, learning science is a valuable pursuit. Students can experience the joy of scientific discovery and nurture their natural curiosity about the world around them.

## HUMANITIES & SOCIAL SCIENCES

In the Australian Curriculum, the Humanities and Social Sciences learning area includes a study of history, geography, civics and citizenship and economics and business.

Through studying Humanities and Social Sciences, students will develop the ability to question, think critically, solve problems, communicate effectively, make decisions and adapt to change. Thinking about and responding to issues requires an understanding of the key historical, geographical, political, economic and societal factors involved, and how these different factors interrelate.

The Humanities and Social Science subjects in the Australian Curriculum provide a broad understanding of the world in which we live, and how people can participate as active and informed citizens with high-level skills needed for the 21st century.

## ETHICAL UNDERSTANDING

In the Australian Curriculum, students develop ethical understanding as they identify and investigate the nature of ethical concepts, values and character traits, and understand how reasoning can assist ethical judgement. Ethical understanding involves students building a strong personal and socially oriented ethical outlook that helps them to manage context, conflict and uncertainty, and to develop an awareness of the influence that their values and behaviour have on others. It does this through fostering the development of 'personal values and attributes such as honesty, resilience, empathy and respect for others', and the capacity to act with ethical integrity.
